

Why Natare?

For competition and training facilities

Natare has the resources, experience and capabilities to provide comprehensive swimming pool, aquatics and water feature design, consulting and construction services for swimming pools, water features and aquatic facilities.

Who We Are...

Our group draws upon collective experience with thousands of public swimming and water feature projects, and our client list includes corporate accounts ranging from the Hyatt Corporation to IBM; educational institutions such as Indiana University; medical facilities, military and community recreation departments throughout the United States; and some of the world's most prestigious aquatic competition venues, including the IU Natatorium in Indianapolis, which is known as the world's fast pool, the Ponds Forge International Sports Center in Sheffield, England, Scotiabank Aquatics Center, site of the 16th Pan American Games in Guadalajara, Mexico, and the Shanghai Oriental Sports Center, site of the 14th FINA World Championships.

For more than four decades, we have helped to create, construct, operate and renovate state of the art facilities worldwide. Our expertise and expert advice has played an important role in the design, construction and operation of swimming pools, water features and aquatic facilities around the globe.

You may know us as the company that designed and supplied high quality systems, or you may have been familiar to our unique approach to designing and renovating swimming pools, water containment and waterproofing. Our name reflects our commitment to aquatics.

Natare provides consulting, technical and engineering services for construction or renovation of public, semi-public and commercial swimming pools, aquatic facilities and water features.

- Programming, conceptual design, design assistance, feasibility and sound advice in the planning, construction or renovation of aquatic facilities.
- Expert advice and problem solving assistance related to the construction, operation, maintenance, programming and use of pools, spas and aquatic facilities.
- Construction services from installation assistance to complete project management.

Why Natare?

Our Expertise and Experience...

The heritage of Natare dates back to the late 1960s, to a time when amateur swimming in Indiana combined with powerful university swimming programs to produce some of the most outstanding competitive swimmers in the nation. These swimming programs had their roots in some of the largest recreational and community swimming pools in the nation. In fact, some of the first “waterparks” were constructed and successfully operated in Indiana, including the first wave pool in the nation.

We began in 1969 with a mission to supply systems and services for swimming pools from Olympic facilities to the neighborhood swim club. During the years that followed, we grew dramatically, eventually ranging from residential pool construction to helping design, construct and supply some of the largest and most prestigious competitive, recreational and institutional aquatic facilities in the world. As our growth continued, we selected the name “Natare” to affirm our commitment to aquatics. Natare is the Latin verb “to swim” and everything we do is committed to this purpose.

Today, Natare is the source for expertise and design assistance for public and private communities, planners, developers and architects. Whether it involves feasibility, programming and planning, design, construction or operation, we supply the answers for swimming pools, spas, aquatics and water features. From concept and design through construction and operation, we take pride in the ability to offer a single source of planning and design assistance, expert advice and straight answers for facilities, systems and projects that need to be done **on time, on budget and right the first time.**

Our experienced staff combines years of coaching and competition with hands-on pool construction and operation to produce pools and aquatic facilities that work and will keep working well into the future.

Planning and Engineering

The design, construction, operation or renovation of a swimming pool facility or water feature is an extremely complex process. Whether it's an innovative, multi-purpose aquatic facility, an elevated specialty pool, exotic resort pool or the unique application of decorative and display waters; selecting the concepts, designs, systems and construction methods for a project is a difficult and complicated task.

Technical excellence, specialized knowledge and years of critical experience are vital to the design, engineering and construction of an aquatic facility. These capabilities are standard with Natare. For more than three decades, we have been supplying the concepts, designs and expert counsel which have become the standard of the industry and a scale by which others can be judged.

Individual staff experience ranges from five to 35 years of hands-on participation in all areas of the planning, construction and operation of swimming pools and aquatic facilities. We know how facilities are constructed and operated - and understand costs.

Natare has established a solid reputation based upon providing expert managerial, technical and engineering assistance. Our diversified staff has gained valuable and extensive experience in project management skills through detailed involvement in the design, construction and operation of state-of-the-art aquatic facilities worldwide.

Natare provides the technical expertise, essential components and construction services for thousands of projects. We respond to our customers' needs on a project-by-project basis. These unique relationships produce lasting aquatic success stories, both for Natare and our clients on a global scale.

Why Natare?

Why Natare?

The proper design and construction, repair or renovation of a swimming pool facility or water feature is an extremely complex and lengthy process. Unfortunately, few individuals have the opportunity to be involved in this process, but those who are need the help of experts. Our engineering, consulting and project management team can provide the experience, technical expertise, and creative thinking that is so critical to define the form and function of the project.

Acquiring the perspective and experience to provide comprehensive assistance in design, construction, renovation and facility operation requires years of effort and a good measure of specialized knowledge. At Natare, we translate our expertise and experience into successful swimming pool or aquatic facility construction and operation every time. As nationally recognized experts, we take great pride in consistently providing design innovation, technical assistance and top-notch engineering services.

Natare has established a solid reputation based upon providing expert managerial, technical and engineering assistance. Our diverse staff has gained valuable and extensive experience in project management skills through detailed involvement in the design, construction and operation of state-of-the-art aquatic facilities worldwide.

Capabilities...

When it comes to swimming pools and aquatic facilities, Natare does it right the first time. We bring experience, expertise, and a complete selection of technical and supporting services to aid with new construction, renovation or operation of any swimming or aquatic project. Our services are tailored to the needs and requirements of municipal, institutional, commercial, and public swimming pools and aquatic facilities.

The proper design and subsequent construction of a swimming pool facility is an extremely complex process. Few individuals have the opportunity to be involved in this process more than once. More than 40 years of vital involvement in every aspect of swimming pool design, construction, operation and maintenance has given Natare national acclaim as a leader in the industry. Our expertise provides the specialized knowledge of design requirements, construction techniques and equipment capabilities essential to complete your project on-time and on-budget.

Natare can help recognize and avoid the pitfalls and problems associated with new pool construction and renovation that can prevent your project from being completed on time and within your budget.

Developing the right design strategy; selecting the right design approach; understanding program requirements; selecting the right construction programs, systems and equipment can all mean the difference between pools and aquatic facilities that are lasting, functional and cost efficient - and those that are "difficult".

Whether it's an innovative multipurpose recreational and competitive swimming facility, a community pool complex, an elevated specialty pool, exotic resort pool or a special purpose medical or therapeutic pool, we have the correct answers and the right advice for any project.

Why Natare?

What We Do...

We provide innovative solutions and solid advice to the demanding tasks of planning, developing, designing, constructing or renovating swimming pools, aquatic facilities and water features. We can assist with all areas of the planning, construction and operation of swimming pools and aquatic facilities. We know how facilities are constructed and operated - and understand costs. Once the specific designs are completed, we manufacture the necessary components for a successful project and supply those items not manufactured by Natare from a pool of experienced and proven manufacturers and suppliers. With the necessary materials and equipment in place, we provide the field construction services to deliver a project that is on time, on budget and done right the first time.

Technical Assistance and Consulting Services...

Natare provides engineering, technical and design assistance in the planning, programming, design, selection and specification of swimming pools, aquatic facilities and water features.

We know how to accurately determine project and program requirements and the individual needs of each project, program or system. Natare will help in identifying and understanding the needs, wants and wishes that are so important in the initial planning and programming for facility construction or renovation. We understand the needs of recreational aquatics, competitive swimming, community recreation and the special needs of selected populations. We listen, and we speak the language. Engineering assistance, systems calculations, preliminary design schematics, finished standard construction details and specification development are all part of the “single source responsibility” available from Natare. You may count on receiving expert counsel from people who know equipment and construction and “how things work.”

The successful design of a swimming pool facility begins with a careful evaluation and discussion of your needs. Natare serves as a catalyst, providing input and helping to shape the project to fit your individual requirements, while working within physical and economical constraints. We provide the architect, engineer and owner with the specialized knowledge essential to a successful swimming pool project, whether it's new construction, renovation or repair or simply a problem with daily cost effective operation.

Our involvement in the design and manufacture of a wide range of swimming pool equipment allows Natare to offer a unique perspective on equipment performance. This extensive knowledge gives us the opportunity to be involved throughout the project, from concept through design to actual construction.

Natare offers a wide range of services for comprehensive assistance in construction, renovation, and facility operation. Assistance with the selection, design, specification and construction of pools and aquatic facilities using Natare pools, pool systems and equipment is provided free of charge. Additional consulting, engineering, installation and project management services are available and are tailored to the specific requirements of each project.
